# Speedy-Versatio

## Reinforced kickstand

The individual adjustment to the cyclist and the weight of the Speedy B26 may lead to the Speedy B26 standing unstably. With the reinforced kickstand manufactured from 10mm material, the stability can be improved. The reinforced kickstand cannot be fitted with a protective rubber.

## Wide kickstand

The wide kickstand is made of 8 mm-thick material and offers increased stability due to its form.

## Kickstand extension

The kickstand extension is used when the normal length of the kickstand is insufficient due to an unfavourable constellation between wheelchair type and Speedy HP and the Speedy HP is very unstable. The limbs of the detachable kickstand can be extended by 50mm or 100mm in order to improve the stability.

## LED lighting set

The LED lighting set consists of:  
- LED headlamp with batteries and charging device. The headlamp is mounted to the Speedy Bike by means of a holding device.  
- LED back light with batteries. The back light is attached to the left side of the wheelchair's back rest by means of a holding device.

## LED headlamp

LED headlamp with batteries and charging device. The headlamp is mounted to the front of the device using a holding device.

## LED back light

The back light is attached to the left side of the wheelchair's back rest using a holding device.

## Carrier with front reflector

Made of aluminium and height-adjustable. Perfectly suited for the transport of small things.

## Chain coating made of Teflon pipe

The chain coating of Teflon pipe protects the cyclist and his clothes against soiling caused by the chain. The chain coating, which encloses the chain near the knees, is made of a light, thin-walled plastic tube with extremely low friction resistance.

## Coupling handle

Handle for lifting of the device with either one or two hands when coupling or decoupling.

## Coupling handle angled

Handle for lifting the device with either one or two hands when coupling or decoupling.

## Leg rest

The leg rest serves as support for the legs in case of knee stiffness. The legs are secured using a belt with Velcro straps. The distance to the bike as well as the forward or backward inclination are adjustable.

## Home trainer

The home trainer makes it easy for you to stay in shape throughout the year.

## Speedy Bag

The transport bag for the complete Speedy HP is made of hard-wearing Nylon (with long shoulder straps for pedestrians and short carrying handles for wheelchair users). In the Speedy Bag, the Speedy HP cannot be scratched and even when transported on the back seat, the interior of the vehicle will not get soiled

## Traction aid

Two additional weights, each 5 kg, in order to improve the traction of the front wheel. The clickfix-mechanism makes it easy to put the weights on or to remove the weights.

## Console Classic

## Console Connect
